POWERSTATION1500™

OVERVIEW

The TrickleStar® PowerStation1500™ is your ideal portable power station solution for emergency home backup and outdoor power applications. Ready to safely power mobile devices and other sensitive electronics or portable lights, heaters, or power tools, the PowerStation1500 is there when you need it most.

Weighing just under 40 lbs. (18 kg) and with an ergonomic handle, it is both easily storable and highly portable. Featuring both AC and solar panel charging, it also has a wide range of power output formats including USB Type-A, USB Type-C, 120 V AC, and 12 V DC. The unit's LCD Status Display provides battery status, working conditions, and error notifications.

Our unit's foundation relies on a state-of-the-art, lithium-ion battery designed to deliver safe, long-lasting, and reliable power. Featuring Pure Sine Wave power output, connected devices charge and operate at peak efficiency with optimal longevity. Protecting our lithium-ion battery and connected devices is our intelligent Battery Management System ("BMS"). The BMS maximizes power output, minimizes charging time of connected devices, and extends battery lifespan. It also provides protection against over-charging, over-voltage, over-current, short circuit, and overload.

The PowerStation1500 supports charging from an AC power source or from a connected portable solar panel to allow fast and easy charging regardless of your power source or location. You can also use the included Y Anderson to DC 7909 Adapter cable to connect up to two 100 W solar panels to quickly charge your PowerStation1500. Equipped with a range of power output options, the PowerStation1500 offers outstanding flexibility to safely power different devices via:

- 120 V AC outlets (4)
- USB Type-A ports (4)
- USB Type-C port (1)
- 12 V DC port (1)
